

Certified Reimbursement Diligence Assessment

A governed assessment of the reimbursement posture of one medical technology: what the record states about its benefit category, coverage, coding, payment, and the evidence behind each — with every gap rendered rather than filled.

TEMPLATE v1.0 · SECTION ARCHITECTURE RATIFIED 2026-08-24

SPECIMEN

SUBJECT	[Technology name · manufacturer · indication — stated as engaged]
ENGAGEMENT	[Order / statement of work identifier · date]
CERTIFICATE_ID	NONE — SPECIMEN
VERIFICATION	No certificate has been issued for this document. A real assessment carries an FRXS identifier and a public verification address at which any reader may check it, free, with no account. This specimen deliberately carries neither.
METHODOLOGY	[registry identifier] · [version] — validation status stated verbatim from the registry
SOURCES OF RECORD	[Enumerated in §2 with retrieval dates. Nothing in this assessment is fetched live.]
White-label note. The shaded brand slots (issuer name, mark, footer identity) are replaceable under a white-label agreement. The provenance system, section statuses, gap rendering, and verification language are structural and are not.	

How to read this document

CERTIFICATE RECORD

COMPUTED

ANALYTICAL

NO_DATA_AVAILABLE

Reproduced exactly as recorded from a signed source. Never paraphrased.

Arithmetic over enumerated inputs, recomputable by anyone holding the same record. The computation is named.

Reviewer synthesis, attributed and signed. Analysis is never presented as record.

Section status: **complete** · **partial** · **evidence_insufficient** · **no_data_available**.

Coverage never reads as provenance: a complete section is not thereby certified, and a certified assessment may carry sections with nothing behind them — stated, not hidden.

An honest absence. Dashed means the record states nothing; it is never an error and it is never filled.

Scope & basis

1 Engagement scope & asset identification

CERTIFICATE RECORD

Status:  [set at issuance]

[The technology, indication, and question in scope, exactly as the order states them. Work outside this scope is a new order, not an expansion.]

2 Sources of record & retrieval dates

CERTIFICATE RECORD

Status: [set at issuance]

[Every source enumerated with its retrieval date: [CMS Coverage Database – retrieved YYYY-MM-DD], [Federal Register – YYYY-MM-DD], [client data room – received YYYY-MM-DD]. This is a frozen snapshot; figures reflect the record as it stood on retrieval.]

3 Methodology & version

CERTIFICATE RECORD

Status: [set at issuance]

[Registry identifier, version, and validation status verbatim. A methodology validated only by the people who wrote it is stated as such.]

4 Conditions & limitations

ANALYTICAL

Status: [set at issuance]

[Every condition the findings rest on, stated up front. Reliance without regard to stated conditions is unreasonable, and the assessment says so. This is not legal advice, not a coverage guarantee, and not a payer determination.]

Benefit & regulatory basis

5 Benefit category determination

ANALYTICAL

Status: [set at issuance]

[Which statutory benefit category the technology falls under, with the reasoning attributed. Where the category is unsettled, the ambiguity is a finding, not a footnote.]

6 Statutory & regulatory basis

CERTIFICATE RECORD

Status: [set at issuance]

[The provisions and rules that govern coverage and payment for this category, cited to the record.]

7 Regulatory status as it bears on coverage

CERTIFICATE RECORD

Status: [set at issuance]

[FDA pathway and status exactly as recorded, and what each status does and does not establish for payers. Clearance is never presented as coverage.]

Coverage

8 National coverage posture

CERTIFICATE RECORD

Status:  complete · worked example — bracketed values are template placeholders

WORKED EXAMPLE — FORM ONLY

National coverage instrument: [NCD §xxx.x – title], effective [YYYY-MM-DD], disposition as recorded: [covered with conditions / non-covered / no NCD in force]. Reconsideration history: [n] proceedings, most recent opened [YYYY-MM-DD]. Where no national instrument exists, that absence is stated here and coverage authority passes to Part III §9.

9 Local coverage — LCDs & articles by contractor

CERTIFICATE RECORD

Status: [set at issuance]

[Each governing local determination and article, by contractor, with effective dates and dispositions as recorded.]

10 Contractor jurisdiction variation

COMPUTED

Status: [set at issuance]

[Computation named: [jurisdiction-variation-vX] over the §9 inputs — how many jurisdictions cover, restrict, or are silent. Arithmetic over the record, recomputable by anyone holding it.]

11 Coverage-with-evidence exposure

ANALYTICAL

Status: [set at issuance]

[Whether the coverage posture depends on evidence-development conditions, and what those conditions obligate.]

12 Commercial & Medicare Advantage policy landscape

NO_DATA_AVAILABLE

Status:  no_data_available · worked example — this is what an honest absence looks like, rendered

Commercial payer policies were not in the engaged record for this assessment. No policy is inferred from a plan's silence, and no posture is extrapolated from the Medicare instruments in §§8–10. The snapshot does not carry it.

13 Prior authorization & utilization management

CERTIFICATE RECORD

Status: [set at issuance]

[Documented authorization requirements and utilization controls as recorded, by program.]

PART IV

Coding

14 Code inventory & status

CERTIFICATE RECORD

Status: [set at issuance]

[Every procedure, product, and diagnosis code in the record for this technology, with status and effective dates as recorded.]

15 Code adequacy & gap analysis

ANALYTICAL

Status: [set at issuance]

[Whether existing codes describe the technology and its service as performed — and where they do not, what that gap costs.]

16 Pathways for new or temporary codes

ANALYTICAL

Status: [set at issuance]

[The applicable code-establishment pathways, their calendars, and their evidentiary requirements as they bear on this technology.]

Payment

17 Payment system mapping

CERTIFICATE RECORD

Status: [set at issuance]

[Which payment systems the service touches in each setting, as the record maps them.]

18 Rates & relativity as stated

CERTIFICATE RECORD

Status: [set at issuance]

[Published rates and relative values reproduced exactly, with their vintages. No rate is projected.]

19 Site-of-service economics

COMPUTED

Status: [set at issuance]

[Computation named: [site-differential-vX] — the stated payment differential across settings, computed from §18 inputs only.]

20 Policy-change exposure

ANALYTICAL

Status: ☒ complete · worked example — the question this section exists to answer

WORKED EXAMPLE — FORM ONLY

Pending and proposed instruments that would reprice or re-gate the service: [instrument — docket — comment close date]. For each, the exposure is stated as the question a diligence reader actually holds: **if this code, rate, or coverage condition changes as proposed, does the evidence base in Part VI still support the commercial thesis — or was the thesis standing on the code?** The answer is attributed analysis, and it cites Part VI by section.

Evidence

21 Evidence base inventory

CERTIFICATE RECORD

Status: [set at issuance]

[Every study and data source supplied or cited, enumerated with design, population, and endpoints as recorded — including what the originating work explicitly excluded.]

22 Evidence sufficiency against payer criteria

ANALYTICAL

Status: [set at issuance]

[Each coverage criterion from Part III mapped to the evidence that does — or does not — meet it. A claim the evidence cannot carry is stated as such here, whatever the marketing says.]

23 Evidence gaps, stated

ANALYTICAL

Status: [set at issuance]

[The gaps themselves, enumerated — what would need to exist for each insufficient section to move, without any commitment that it will.]

Synthesis

24 Findings & conditions

ANALYTICAL

Status: [set at issuance]

[The findings, each resting visibly on the sections above, each carrying its conditions. No finding appears here that the record and the stated analysis do not support.]

25 Reviewer attestation & verification

CERTIFICATE RECORD

Status: [set at issuance]

[The named reviewer, the review record, the signature, and the public verification address. Narrative present means human-reviewed — that equivalence is enforced, not asserted.]

Attestation — issuing copy only

On an issued assessment this block carries the reviewer's signature, the issuance date, the certificate identifier, and the verification address. On this specimen it deliberately carries none of them.
